## **Project Title: Philosophy of Artificial Intelligence**

I'd like to build this site as multiple pages, rather than a long, single page website. Typical site navigation will be in a column on the left. The amount of content and subjects within this article suggest that separate pages will be much needed to help organize information.

**Home Page/Introduction** - Introduce the role of philosophy in AI and understanding the human mind. Give a brief overview of the computational theory of the mind, and what each subpage has in terms of content/concepts/arguments.

**General Intelligence/Strong AI** - Define General Intelligence, provide famous arguments for whether machines can display general intelligence

**Consciousness and Mental States** - Defining Consciousness and Mental states, provide famous arguments for whether machines can be conscious/have mental states

**Emotions** - Defining Emotions in humans, provide arguments for whether machines have emotions (behavior vs. feeling)

**Creativity** - Defining Creativity in humans, provide arguments for whether machines have creativity

**Benevolence/Hostility** - Defining benevolence/hostility, provide arguments for whether machines have benevolence/hostility

**Vocabulary page** - running list of all confusing terms on this website.

**Sources** - this page will just list sources, including the Wikipedia page, as well as other sources for photography, and any other credits that need to be provided.
